INSTALLATION HEIGHTS

Depending on the configuration of your system, it may not always be possible to install every model. Here is a range of suitable options for every installation.

CAMALEON	HEIGHT (mm)
100 (water seal 30)	79
100 (water seal 50)	99
120 (water seal 50)	83
150 (water seal 50)	94

GRID DESIGNS

You can choose from 3 grid sizes, 100x100, 120x120 and 150x150 mm and 7 different designs

INSTALLATION

We recommend the installation of Camaleon in a central position in any of these configurations.

Linum triangular

INSTALLATION HEIGHTS

Depending on the thickness of the slab and the available height, you can choose:

Integrated trap version:
100 mm
Swivel outlet trap version:
112 mm

GRID DESIGNS

You can select from 5 triangular grid designs. Dimensions: 236x236x332 mm.

INSTALLATION

We recommend the installation of Linnum triangular in a corner with a single slope.

Linum 70 / 50

INSTALLATION HEIGHTS

Depending on the thickness of the slab and the available height you can choose one of these models:

Linum 70: 121 mm
Linum 50: 101 mm

Linum 50 reduced height

INSTALLATION HEIGHTS

Linum 50 reduced height gives has a minimum height of 75 mm for installation.

GRID DESIGNS

6 grid lengths can be chosen , 350, 550, 650, 750, 850 and 950 mm. 12 grid designs and 2 widths.

INSTALLATION

We recommend the installation of a drainage channel, one slope in any of these positions.

Floor gullies for tiled shower trays

Jimten has a wide range of floor gullies for tiled shower trays with grids and frames 100x100 mm AISI 304 stainless steel made, with 30 or 50 mm water seal trap and extensible plastic or stainless steel frame finish.

	WATER SEAL 30 mm	WATER SEAL 50 mm
Extendable	6 - 86 mm	26 - 86 mm
Total height	79 mm mín.	99 mm mín.
Flow rate	0,84 l/s*	0,81 l/s*

*Tested according to EN 1253-2.

Two installation options according to the available height

There are two versions of internal trap, with two water seal heights, 30 and 50 mm, allowing you to choose the model that best fits the overall height of your installation.

Camaleon 100 floor gullies equipped with 50 mm water seal, present a minimum installation height of 106 mm, with a extensible raiser from 33 to 93 mm over the waterproofing. Complies with the requirements of the EN 1253-2 standard evacuating flows up 0.81 l/s.

Camaleon 100 floor gullies equipped with 30 mm water seal, present a minimum installation height of 86 mm, with a extensible raiser from 13 to 93 mm over the waterproofing. Complies with the requirements of the EN 1253-2 standard evacuating flows up 0.84 l/s

Grid designs and finishes

We have a wide range of grid designs for you to choose. The basic models include **Clasic** grid, made of stainless steel cut by stamping. The grids **Cuadrícula**, **Ondas** and **Oval**, are manufactured in stainless steel 3 mm thickness by laser cut.

All grids are available in satin and chrome finish.

There is a version of the model grid **Clasic** with vandal security screws, especially suitable for public places (gyms, schools, hotels, etc..).

Camaleon series

General characteristics

120 mm **150 mm**

Floor gullies for tiled shower trays

The grids and frames are made in stainless steel AISI 304, the raiser height regulation between 20 to 113.5 mm allow a perfect finishing in every installation. Available in vertical or horizontal outlet, they comply with the requirements of the EN1253-2 standard.

The new trap system, with 50 mm water seal, fulfils the requirements for the EN 1253-2 standard. Equipped with a metal handle, to allow its removal for maintenance, allows the extensible raiser to adapt to every type of tiling with thicknesses between 10 mm to 90 mm.

The optimized interior trap design obtains a flow rate up to 0,85 l/s (horizontal outlet) and up to 1,3 l/s (vertical outlet).

The CAMALEON floor gully is the perfect solution to solve the water channeling in places where perfect aesthetics and an optimal evacuation is a must.

Two installation options

There are two outlet versions, horizontal or vertical that will allow you to choose the model that best fits the overall height of the installation.

The new pressing ring systems are compatible with different water tightening fabrics (up to 1mm in thickness) whether in PVC or geotextile.

Grid designs and finishings

We have two grid designs for each size. The basic models include stainless steel grid made by stamping. The grids **Cuadrícula** are manufactured in stainless steel 3 mm thickness laser cut.

All grids are available in satin and chrome finish.

There is a version of the **Camaleon 120** and **150** grids with vandal security screws, especially suitable for public places (gyms, schools, hotels, etc..).

Range of combinations

Stainless steel grid
112x112 / 142x142 mm.

Stainless steel frame
120x120 / 150x150 mm.

Extendable. It allows to adapt to different tile & water tightness thicknesses, from 10 mm to 90 mm.

Perfect fit to the body thanks to the o-ring which fits the pressing ring preventing movements during the installation.

Trap body.
With 50 mm hydraulic seal, with water tightness joint and handle for an easier cleaning.

Stainless steel screw 6 units.

Pressing ring. Compatible with PVC or geotextile up to 1mm thickness.

Floor gully body.
Available in vertical outlet Ø50mm (M) or horizontal outlet Ø40/50mm (M).

Big flow rate.
It evacuates up to 0,85 l/s EN1253-2 horizontal outlet, and up to 1.3 l/s vertical outlet.

S-552

Camaleon series

Assembly instructions

Installation

CAMALEON floor gully allows a fast and easy installation.

- 01 Prepare the installation area and mark the place where you wish to install the floor gully.

- 02 Depending on the chosen diameter Ø40 or Ø50 mm, (this may require you to pre cut gully outlet) clean pipe and gully outlet. Push together into the joint or glue depending on pipe material.

- 03 Fill in the shower tray base, and under the floor gully body for support, with cement. Protect the interior part of the gully to prevent blocking the drain. The shower base should have a slope towards the gully (we recommend a minimum 2 degree slope).

- 04 Install the water proof barrier (we recommend using a geotextile or PVC membrane) onto a previously laid cement base, we recommend that the membrane is extended onto the vertical walls to a minimum of 10-15 cm. On all corners the fabric must be folded instead of being cut into shape.

- 05 Secure the membrane to the gully using the clamping ring and 6 screws supplied. To enable an easier assembly align the screw holes with the triangular shaped marks on the floor gully body.

- 06 The floor gully is equipped with a raiser which allows the use of different thicknesses of water proofing membrane (from 10 to 90 mm) The raiser should be protected during tiling using the supplied protection cover.

- 07 Cut the raiser to the desired height and fix an o-ring onto the bottom part of the raiser. Firmly push the raiser onto the gully clamping ring (which will already be installed and screwed onto the floor gully body).

- 08 Apply tiling cement on the water proofing membrane to the desired thickness (between 10mm - 90mm).

- 09 Tile with the desired design onto the tiling cement.

- 10 Remove the protection cover. Install the interior part of the trap body and bell by firmly pushing it into the floor gully base (this trap can be removed for cleaning).

- 11 Fix the stainless steel grid over the gully frame to get the final finishing.

Linum series

Linnum 50 reduced height

Technical characteristics

Linnum 50 reduced height

The linear drainage allows stylish designs as it enables easier installation of built made shower slopes.

Install a floor access level shower tray thanks to the shallow height of the shower channel.

The exclusive fixation technology for water tightening fabrics, the channel floor fixation and the grid height regulation system adapted to different finished floor thicknesses, make an easy to install set, perfect finish and reliable operation.

With the Linnum 70 range, formed by a channel body with orientable waste outlet and accessible trap, you can get a flow rate up to 0,6 l/s (according to EN274), allowing installation with columns and high flow sprinkler

ODOUR FREE

With Linnum, Jimten offers the optimal solution to prevent trap de-siphoning produced by downpipe suction effect, avoiding the appearance of odours in your bathroom.

Operation:

Open vac-valve

Closed vac-valve

The vac-valve channels are equipped with a silicon joint which only opens in case of suction, allowing the air entrance inside the downpipe, preventing the hydraulic seal from disappearing.

Technical characteristics

REDUCED HEIGHT CHANNEL S-650, S-651, S-659

Stainless steel grid, 2 designs in laser cut and 4 in stamping cut available in 4 different lengths.
(Sold separately)

Protection cover to be used during tiling process

Stainless steel narrow frame and height regulation pins set.

Stainless steel frame, adjustable in height

Unique clamping system to securely attach a water tightening fabric onto the channel body

As an option, 2 types of outlets are available, you can choose a connection 40F/50M mm to be glued or a 45° elbow, male outlet in Ø40/50 mm which can be oriented.

Complies with the requirements of the EN 274 standard

Detachable interior PP injection moulded trap with register cover for inspection (Optional installation)

Dual positioning height regulations pins, the grid and frame can absorb from 6 to 16 mm tiling thickness (only for visible frame)

ABS injection moulded body, with inner slope and integrated trap for a better water flow.

Supporting feet, with height regulation, it allows a secure fixation of the channel to the floor while installing the channel (with the supplied screws)

Horizontal outlet
Ø40F/50M

45° elbow orientable
outlet in Ø40-50M

Narrow frame and custom finish

Narrow frame:
New minimalist concept of frame, suitable for the whole range of available grids, ideally suited to any ambience.

Custom finish:
Thanks to its reversible design, Soft model, different finishes (ceramic, marble, glass) can be obtained. Simply by turning the grid 180° you will get a fill-in frame to match the bathroom design.

C	340	540	640	740	840	940
D	51,5	51,5	51,5	51,5	51,5	51,5

Each grid has been manufactured in AISI 304 stainless steel, choose a design and a length from all the product range.

Spring and **Square** designs are laser cut and models **Classic**, **Soft**, **Elegance** and **Bubble** are stamping cut.

The grid model **Crystal** is made in high-strength tempered glass, and available in different colours.

Except models **Soft** and **Classic** (available in kit) the grids are sold separately, they are not included in standard packaging.

Linnum 50

Technical characteristics

Linnum 50

The linear drainage allows stylish designs as it enables easier installation of tiled shower trays.

The exclusive fixation technology for water tightening fabrics, the channel floor fixation and the grid height regulation system adapted to different finished floor thicknesses, make an easy to install set, perfect finish and reliable operation

With the Linnum 70 range, formed by a channel body with orientable waste outlet and accessible trap, you can get a flow rate up to 0.8 l/s (according to EN274), allowing installation with columns and high flow sprinkler

Technical characteristics

LINNUM CHANNEL 50. S-750, S-751, S-759

Stainless steel grid, 2 designs in laser cut and 4 in stamping cut available in 4 different lengths.

(Sold separately)

Detachable interior PP injection moulded trap

(Optional installation)

Protection cover to be used during tiling process

Stainless steel narrow frame and height regulation pins set.

Stainless steel frame, adjustable in height

Height regulation pin. It allows to adapt the frame of the thickness of the tiles. (6-16 mm)

Unique clamping system to securely attach a water tightening fabric onto the channel body

ABS injection moulded body, with inner slope and integrated trap for a better water flow.

As an option, 2 outlet versions are available, you can choose from a female for smooth pipes connection with tightening nut & joint in 40 mm (that can be glued) or a 45° elbow for orientable PP male outlet in Ø40/50 mm.

Supporting feet, with height regulation, it allows a secure fixation of the channel to the floor while installing the channel

(with the supplied screws)

Complies with the requirements of the EN 274 standard

Horizontal outlet
Ø40F

45° elbow orientable
outlet in Ø40-50M

Narrow frame and custom finish

Narrow frame:

New minimalist concept of frame, suitable for the whole range of available grids, ideal to suit every floor design.

Custom finish:

Thanks to its reversible design, **Soft** model, different finishes (ceramic, marble, glass) can be obtained. Simply by turning the grid 180° you will get a fill-in frame to match the bathroom design.

Linnum 50

Product range

Slot drainage channel without grid.

5 Grid designs

Each grid has been made in AISI 304 stainless steel, choose a design and a length from all the product range.

Garden, Waves and **Sequence** designs are laser cut and models **Classic** and **Soft** are stamping cut.

Except models **Soft** and **Classic** (available in kit) grids are sold separately, they are not included in standard packaging.

Technical characteristics

LINNUM CHANNEL 70. S-770, S-771, S-779

Stainless steel grid, 2 designs in stamping and 3 laser cut available in 6 different lengths.

(sold separately)

Protection cover to be used during tiling process

Stainless steel frame, adjustable in height

Trap with register cover for inspection

(Optional installation)

Dual positioning height regulations pins, the grid and frame can absorb from 6 until 16 mm tiling thickness

Unique clamping system to securely attach a water tightening fabric onto the channel body

ABS injection moulded body, with inner slope for a better water flow.

Supporting feet, with height regulation, it allows a secure fixation of the channel to the floor while installing the channel (with the supplied screws)

As an option, 2 outlet versions are available, you can choose from a female for smooth pipes connection with tightening nut & joint in 40 mm (that can be glued) or a 45° elbow for orientable PP male outlet in Ø40/50 mm.

Complies with the EN274 standard

Horizontal outlet
Ø40F

45° elbow orientable
outlet in Ø40-50M

Custom finish

Custom finish:

Thanks to its reversible **Soft** design, different floor finishes... (ceramic, marble, glass) can be obtained. Simply by turning the grid 180° you will get a fill-in frame to match every bathroom floor design.

Linnum 50 / 70

Assembly instructions

Installation

01 Fix the supports to the channel body. Choose the holes depending on the outlet position.

02A Place the internal channel trap inside the models that incorporate integrated trap.

02B or attach the waste outlet body to the channel at the desired position - using the tightening key supplied

03 Present the set onto the installation. Mark, drill and screw to the floor structure.

04 Check that the channel body is perfectly leveled.

05 Fix the pipe to the outlet by tightening the nut & joint (in the threaded version) or solvent glue.

06 Fill in with cement the shower channel base and the installation set.

07 Apply sealant along the channel body perimeter.

08 Install water tight fabric and fix it to the channel body using the supplied screws.

09 Cut the remainder and remove it from the interior of the channel.

10 Choose the A pin and its position according to the tile thickness and the used tiling cement (you may not need using pins at all).

11 Install the frame over the pins (or directly onto the channel body).

12 Protect the frame while tiling using the supplied cover.

13 Fill in the floor with a 1-2% slope towards the channel. Tile walls and floor.

14 Remove the protection.

15 Install the grid with the chosen design. Final finishing.

Linnum triangular

Assembly instructions

Installation

01 Mark in the wall the desired position for the product.

02 Place the wall fixation so it is perfectly levelled.

03 Screw the blocking elements of the wall fixation to the floor gully depending on the wall thickness to prevent movements.

04 Place the trap onto the floor gully body.

05 Attach the pipe to the outlet.

06 Fill in with cement the base of the floor gully as well as the rest of the installation.

07 Apply sealant along the floor gully perimeter.

08 Place the water proofing membrane and fix it to the floor gully body with the supplied screws.

09 Cut the remaining and remove it from the interior of the floor gully.

10 Choose the pin A and its position according to the tile and tiling cement thickness B used (it may not be necessary the use of pins).

11 Place the frame onto the pins (or directly onto the floor gully body).

12 Protect the frame while tiling using the supplied protection.

13 Fill the floor with a slope of 1-2% towards the floor gully. Tile wall and floor.

14 Remove the protection.

15 Install the grid with the chosen design.

16 Final finishing.

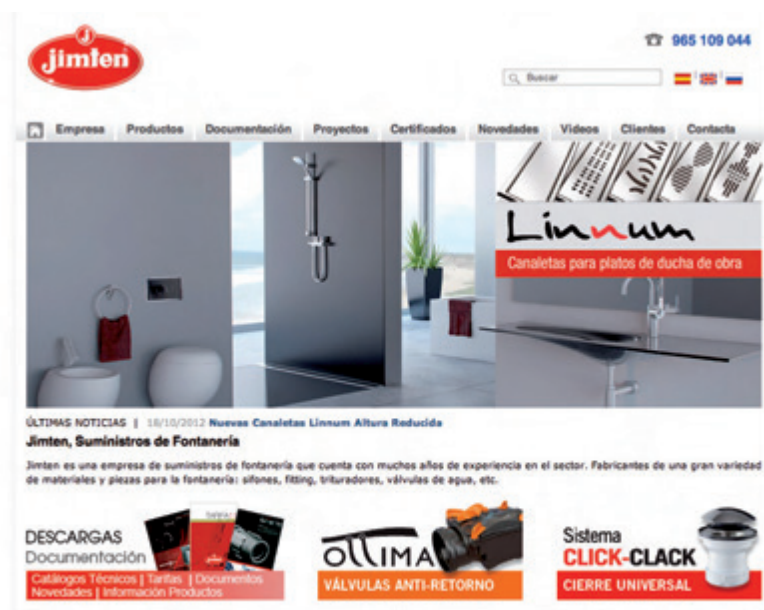

■ Notas

This image shows a full page of blank, lined paper. It features approximately 20 evenly spaced horizontal grey lines across its entire width, providing a template for handwriting practice or general note-taking. The margins are consistent on all sides.
